Contrasting effects of retinoic acid and dexamethasone on the induction of cell differentiation and proliferation of acute promyelocytic leukaemia cells. A clonogenic assay of the induction of differentiation and cell proliferation in acute promyelocytic leukaemia (APL) cells has been utilised to assess the effects of retinoic acid (RA) and dexamethasone on the in vitro growth properties of APL cells. This system showed that RA inhibited the proliferation of all (15/15) APL cells tested while also inducing differentiation, assessed by the appearance of specific granules and vacuoles in the cytoplasm. This effect was accompanied by a marked inhibition of growth. RA inhibited growth without inducing differentiation in NB4 cells and promoted the induction of differentiation in both NB4 and HL-60 cells. These effects were contrasted by dexamethasone which induced differentiation without significantly inhibiting proliferation in NB4 cells and inhibited growth in NB4 and HL-60 cells, thus mimicking the effect of RA. In summary, these results confirm that the growth properties of APL cells are different to those of other leukaemic cells. In contrast to many other leukaemic cells, the growth and differentiation of APL cells can be controlled by two agents: RA and dexamethasone.

1. Field of the Invention The present invention relates generally to a data input apparatus for use in a computer, and more particularly to a data input apparatus for use in a keyboard having a liquid crystal display section.
2. Description of the Related Art A computer generally has a keyboard as an input apparatus. In addition to a keypad section for operating by pressing individual keys with fingers, the keyboard has a function selection section for operating by pressing individual function keys or by moving a cursor on a display section such as a CRT. In the case of the keyboard having such a function selection section, the function selection section is generally disposed at the center of the keyboard or on one side thereof. For this reason, it is common that a large number of keys must be provided in order to accommodate all the functions and control elements to be operated by the user. There is also known a keyboard having a liquid crystal display section on one side thereof for providing the user with information concerning the functions
