And I have a question about dotNetNuke Session Memory. I'm developing a module which has a ListView control in it. And in the Page\_Load event, I'm using Session to store the ViewState of that listview. If I run my module in the website and go to different pages and come back to that same module and the session has been cleared, the ViewState of the listview will be lost and if there are no items in that listview then a blank page will appear when the module is loaded. I'm also wondering whether the Session is cleaned on a scheduled or periodic basis. Please help me. Thanks. A: The session memory is a per session basis. If you are refreshing the list everytime the page is loaded, the session will be reset every time. I think you should know your module is made to work by setting the viewstate of the listview. But you have to think about "session" when making your module.
