The Material Science and Engineering Departments at the U of M study the application of scientific and technological knowledge to human welfare. Our aim is to prepare our students to become well-rounded and productive professionals who are capable of working in the many areas of technology, especially in industry. Thus, our course in materials science and engineering is designed to train scientists and engineers who are capable of designing and fabricating materials for a wide range of applications. The materials science and engineering (MS&E) curriculum is designed to prepare students for professional careers in the material sciences and engineering. The curriculum emphasizes the development of core competencies in the technical disciplines of material science and engineering. Encyclopedia of Applied Science and Technology., 9874. Modern authors and mining engineers. The goal of this study is to enable the student to become an expert in advanced topics in the mineral processing and beneficiation industries, and thereby increase the effectiveness of management, engineering, and professional personnel within those industries. Topics include large-scale, intermediate-scale, and small-scale water- and air-cooling and mining-solution problems in mineral processing, industrial safety, acid rock drainage, environmental pollution, and the exploitation of common and rare-earth materials.
