If I have my app with iOS 8.0 or newer, and I start the load request in the background, the back button appears again and again.

How to disable the back button when I load the request in the background? A: Use this to disable Back Button on App: `self.navigationItem.hidesBackButton = YES;` for YES to false. Q: Can I allow malicious user to start vncviewer in background of Ubuntu? I have installed VNCserver in Ubuntu which does not ask for authentication of user. Because of this I am not able to work on my Ubuntu system. How can I allow my system to be accessed through VNCviewer without password? Is it possible? A: You should allow any user to access your system through VNC, just change your settings on your settings/login page, Either add a new user and give him permission to access your system through VNC. Or give current user permission by going to the users and groups section on your settings/login page, Then change the permissions on `/var/run/vncserver/ sudo chmod 755 /var/run/vncserver/` Note that this permission is needed for your current user to access your VNC server. /ATP synthase 1, mitochondrial (complex V) (1:10,000 dilution, Abcam, Cambridge, MA, USA), and  $\beta$ -actin (1:5,

Dioscorea species, commonly known as  
yams, are members of the Gramineae, a  
group of flowering plants that includes  
grasses, sedges and small herbs. Yams are a  
major food crop for many of the world's  
peoples. Yams belong to the genus Dioscorea,

which contains 31 species distributed from the New World tropics through subtropical and tropical Asia. The word “yam” comes from the Tupi-Guarani word jama, which means “food with the root.” The Genus *Dioscorea* is the largest and most important genus in the Dioscoreaceae. Yams are among the few plants that are taken from the wild. As a food crop, yams are planted in cultivated soils. Soil types include alluvial soils in river valleys, volcanic soils, highland soils and black soils. Yams are usually grown in raised beds with fertilizer added as a foliar spray. Nutritional research indicates that *Dioscorea* species are high in fiber and protein, contain some vitamins, and are known to lower cholesterol and reduce the risk of heart disease. In South Africa, a study of 27 individual yam species and 60 hybrids

concluded that it is probably safe to eat yams that have been canned, frozen or dehydrated. The yam seed oil contains small amounts of the amino acid, linolenic acid. This oil is rich in natural antioxidants and is high in vitamin E. Seeds of the Dioscorea species are usually boiled or roasted and then cracked and ground into flour or meal. The yam starch may be converted into glucose syrup that is used for confectionary purposes. Yams have also been used for making a herbal remedy for over-the-counter diarrhea.
