ultimatezipcracker.exe, to oracle... delete uncrossed.log. My question is, if I have ever downloaded something that is a trojan, I would like to find out which one it was. A: is an updated/enhanced version of VirusTotal. When you download an attachment (it could also be an image) from an email (and the sender is unknown) it is a good idea to first verify that it is safe/malware free. 1. Field of the Invention The present invention relates to a medical treatment system for performing medical treatments such as, for example, blood treatment, for a patient in a body cavity of the patient, and a medical treatment method. 2. Description of the Related Art Medical treatment systems for performing medical treatments on a patient in a body cavity of the patient have been disclosed, for example, in Japanese Unexamined Patent Application Publication No. 2012-019928 and Japanese Unexamined Patent Application Publication No. 2012-037163. The medical treatment system disclosed in Japanese Unexamined Patent Application Publication No. 2012-019928 is a medical treatment system for performing medical treatments on a patient. The medical treatment system includes: a needle holder that has a needle that penetrates a body of the patient, a first insertion unit that moves the needle holder within a body cavity of the patient to perform aspiration treatment and injection treatment, and a second insertion unit that moves the needle holder to extract a tissue sample from the patient's body; a body tissue sample container that contains a body tissue sample obtained from the patient; a transfer container that transfers the body tissue sample container between the body tissue sample container and the second insertion unit; a body tissue sample reagent container that contains a body tissue sample reagent; and a conveyance container that contains the body tissue sample reagent container. When an operation of the system is to be performed, the body tissue sample container is placed on the body tissue sample reagent container, and then the second insertion unit is moved to perform an operation of the system. The medical treatment system disclosed in Japanese Unexamined Patent Application Publication No. 2012-037163 is a medical treatment system for performing medical treatments on a patient. The medical treatment system includes: a sensor that is disposed in a body cavity of the patient; an aspiration tube that is connected to the sensor and is
