Hi guys, please help me to fix VMware Workstation – when I start the application, there is no GUI and application just crashes with a complete system crash. I used a lot of functions on my computer (up to 50) while working and uninstalled all applications (Windows, VMware, Typ-ing program, etc.) and even used other virtual desktops as the only option. I restarted the system many times. I have a Dell XPS 15, 750 Graphics. I used the latest updates from Windows and all software for a long time, but this crash
