I'm looking forward to hearing from you.Q: How to make a simple math equation on my website using JavaScript? I am trying to make a simple website that will tell the distance between you and a point. The equation for this is : $Distance = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$; In the HTML I use the tag to get the values and send it to a JavaScript function. The problem is I have no idea how to put this equation in the JavaScript function. Any help is greatly appreciated. Thanks. A: Here's a sample you can take a look at. HTML: JavaScript:

```
// var for the angle variable var theAngle = 45; // declare a function for distance function distance(x1, x2, y1, y2, angle) { // var for math to calculate distance var Math = Math; // calculates distance var distance = Math.pow(x2 - x1, 2) + (y2 - y1) / Math.cos(theAngle); } document.getElementById('x1').addEventListener('keyup', function() { // call distance() function when input changes distance(this.value, this.value, this.value, this.value, theAngle);
```
