Description: Video To MP4 Converter Video To MP4 Converter is an application with a pretty self-explanatory name - it allows you to turn video files (e.g. 3GP, AVI, ASF, MOV, MPG) into MP4. It can be handled by individuals of any level of experience. The interface of the program is plain and easy to work with. Video clips can be imported into the file queue by using only the file browser, since the "drag and drop" function is not included. Processing several items in batch mode is possible. The file list provides specific information on each entry, namely the name, start and end time (if you want to cut clips), along with total duration and status. So, all you have to do is specify the output directory and preset, in order to proceed with the encoding procedure. Moreover, you can remove an item from the list or clear the entire queue, as well as preview clips in a small, built-in media player and trim them by marking the start and end position. The video conversion program uses a moderate-to-high amount of system resources to encode a video. It has a good response time and manages to preserve a fair image and sound quality in the output videos. No errors have popped up throughout our testing and Video To MP4 Converter did not freeze or crash. On the downside, you cannot configure audio and video settings (e.g. frame rate, aspect rate, frequency, number of channels), specify the thread priority or set Video To MP4 Converter to automatically turn off the computer or to open the output directory after encoding. Video To MP4 Converter has not received any updates recently. System Requirements: Windows 98, 2000, NT, XP, Vista, 2003, 2008, 7, 8, 8.1, 10. Programmed in C/C++. Software Interface: GUI.
