This is a simple, friendly library for parsing expressions into cron schedules. It supports the most common cron formats, allows unlimited occurrences of '*' and '?', and also the idempotent '@(time)' expression. Requirements: Mono/.Net 3.5+ Download Cron.NET: Documentation: License: Known bugs: As it was written for internal use and not for open-source, Cron.NET does not support the special @(time) expression and it is not possible to specify the exact moment of the execution (it is ignored). 1.38 2011-11-10 Added a Async method. 1.37 2011-11-10 Added an Async pattern matching. 1.36 2011-11-10 Changed the regex used to process crontab entries to be a bit more robust, as in the past, we have parsed the space after the pattern character as if it was a word separator, leading to surprising results. 1.35 2011-11-10 Added a new Crontab.Parse() method. 1.34 2011-11-10 Updated the build system to build with mono 3.0.4 1.33 2011-11-10 Cron expression parsing was fixed to be more robust and to remove the indentation used in the last occurence of the expression. 1.32 2011-11-10 Updated the build system to use mono 3.0.3 1.31 2011-11-10 Updated the build system to use mono 3.0.2 1.30 2011-11-10 Added support for the Linux crontab. 1.29 2011-11-10 Changed the type of date to string, to avoid int truncation issues. 1.28 2011-11-10 Cron expression parsing was fixed to consider the '?' character

What's New In Cron.NET?

Cron.NET is a cron expression parser. To parse a cron expression you send it to a method like "parse" and a method like "run" that will match it to the right method, depending on what you want to do. Cron.NET version 1.0.9 is released on December 19th, 2009 and it contains 2 new features : * Cron.NET can now be used in an ASP.NET MVC web application. * Cron.NET can now be used in a Windows Service. Cron.NET is now a total rewrite and it has many new features : * A new class CSharpExpr.cs has been added to the core of Cron.NET and is more easy to use than the old Expression.cs (and it's deprecated). * Cron.NET also has support for CRLF in the expression. * Cron.NET now has a new fluent api. * Cron.NET has a new syntax to express the comparison operators (e.g. "> 5" or ">= 5"). * Cron.NET has a new syntax to express a comment on the expression (eg "# test #"). * Cron.NET has a new syntax to express nested expressions (eg "range" "5" "10" or "1-5" or "1" - "10") * Cron.NET has a new syntax to express the time to execute the expression (see the other examples). * Cron.NET now has support for timezones. * Cron.NET has a new concept of "time-range" : a time to execute the expression and a time to end the execution. * Cron.NET now has a concept of a "callback" that is invoked after the expression is executed. * Cron.NET now has a concept of an "on-time" that will be invoked every time the expression is executed. * Cron.NET now has a concept of an "off-time" that will be invoked when the expression is not executed. * Cron.NET now have a concept of an "until" that will be invoked every time the expression is not executed. * Cron.NET now have a concept of a "period" : a period to execute the expression. * Cron.NET now have a concept of a "daily" : a day to execute the expression. * Cron.NET now have a concept of a "weekly" : a week to execute the expression. * Cron.NET now have a concept of a "monthly" : a month to execute the expression. * Cron.NET now have a concept of a "yearly" : a year to execute the expression. * Cron.NET now have a

concept of a "to" and a concept of a "from" that can be used to restrict the time-
