I want to find the solution to the following recurrence relation: $T(n) = 5 \cdot T(n/2) + O(1)$ where $n \geq 2$ My first idea was to find an upper bound for the running time: $\sum_{i=1}^\infty \frac{i}{n^i} = \frac{n}{n-1} \leq \frac{2}{n}$ By using the master theorem I can derive $n \leq 2$ which is not useful at all. How would you solve this? A: Hint: n is of the order $\log n$ and we have $$ \frac{T(n)}{n}=5\frac{T(n/2)}{n/2}+\frac{O(1)}{n} $$ The left hand side is of the order $\log n$, the right hand side is of the order 1, so you want to show that $$ T(n/2)=\frac{O(\log n)}{n} $$ Suppose we have a look at $$ T(n)=5T(n/2)+O(1) $$ What happens when you divide both sides by $5n$ and take the limit? (like like file structure, when the file data.txt finish read process, next file then read data.txt, after read all data.txt data, close the file, next begin read data.txt, read all data.txt data, close the file, next begin read data.txt, read all data.txt data...) i have this error : fopen failed: Permission denied A: As you can see from the documentation, the FILE * object returned by fopen() is a handle, which must be opened by a higher-level function. The handle is usually a pointer to a buffer, which represents a file; fopen() creates and opens the buffer for the file. The higher-level function may either create the buffer for you, or it may have its own buffers. For example, you can use fgetline() to read a file. This function returns the full line it has read, including a newline character at the end, but it's up to the caller to append the line to the output. Effect of pH on the stability of aqueous solutions of anti-freeze proteins from earthworms, Chionopsis (Tubifex) tubifex and Dichogaster (Tubifex) octosignatus. The anti-freeze proteins (AFPs) from earthworms are rich in hydrophobic amino acids, such as leucine and isoleucine, and have stable AFPs activity at low temperatures. However, the effect of temperature and pH on the AFPs from earthworms is unknown. The present study aimed to investigate the effects of temperature and pH on the AFPs
