Download free trial from its official website! If you are looking for a powerful security solution with a lightweight client, you may want to try McAfee Cloud AV. McAfee Cloud AV can be used both as a standalone solution and a cloud-powered antivirus with the cloud-based functionality. All McAfee Cloud AV features, including cloud-based real-time scan, risk management,

data recovery, content filtering, and more, can be activated without the need to download and install an antivirus product. McAfee Cloud AV is the only cloud-powered antivirus solution that can ensure you full protection of your computer without interfering with your network or Internet connection. Cloud-based protection is able to analyze and interpret data across an online network of McAfee's customers' computers. With this technology, you can be protected from Internet-borne attacks as well as

from computer worms, trojans, and other threats that can be spread via email, web, and file-sharing applications. Google Play: AppBrain: Homepage: McAfee Cloud AV is a cloud-powered security solution that aims to provide protection without bogging your computer with the high workload a classic antivirus requires. In other words, it relies on cloud computing to analyze and compare suspicious files and data and then quarantines the infected files and reports to you. A small client powered by cloud-

based analysis and diagnostics McAfee Cloud AV only deploys a lightweight client application on your computer, which in turn connects to McAfee's web service to diagnose potentially dangerous activity. The application features real-time scanning, constantly monitoring your activity. However, you can run a scan on demand to check the security status of your PC. Unlike traditional antivirus applications, McAfee Cloud AV can only analyze key areas of the computer. To put it another way, it does

not feature quick, full, or custom scans, which you might be accustomed to. Quarantines items and reports about issues that you should look into McAfee Cloud AV displays the security status within its main window, also warning you when the Windows Firewall is disabled. Moving further
