What's New In AutoCAD?

Add annotative images and animations to your drawings using the new annotation capabilities in the AutoCAD® 2D annotation feature. (video: 1:42 min.) Add arrows, text labels, and custom lines, using the new and improved Dynamic Line tool (video: 2:08 min.) Add data to your drawings, including dates, time, and other information. (video: 3:04 min.) If you are currently using AutoCAD® and would like to receive notice of new Autodesk technology releases, please consider registering for our AutoCAD® 2023 Upcoming Technology Trail. Introducing the New Dynamic Line Tool: The new Dynamic Line tool is the first to provide "rough and smooth" line control. A 2D line can be dynamically adjusted using a new rough control value and a smooth control value. This lets you adjust line thickness by changing the values, and control line appearance by using color gradients or line markers. Use the Dynamic Line tool to quickly and easily create a dynamic line with line thickness and color that can be applied to any 2D object in your drawing (video: 2:08 min.) Quickly adjust your Dynamic Line using the mouse wheel, mouse scroll buttons, or even your keyboard with the keyboard shortcuts. Using your mouse or trackpad also lets you adjust your Dynamic Line without affecting other drawing objects (video: 2:43 min.) Changes to Dynamic Lines made with the new tool appear in the Dynamic Line History. Keep track of all the changes you've made to your Dynamic Line and easily return to earlier versions. Adding Layouts, Groups, and Hints to AutoCAD®: Create the simplest of layouts or the most complex of layouts without worrying about how your objects relate to each other. Now it's easy to see the relationships between objects and create them in AutoCAD® by using the new Block tool. The Block tool can help you instantly organize your AutoCAD® drawings by arranging related blocks of objects in an intuitive way. You can also reorganize blocks to quickly rearrange your drawing. Connect objects that you want to create groups, change the appearance of groups, or hide groups. Create a new group or change the appearance of an existing group. There's no need to be a designer to change the appearance of your drawings; just create the groups and change their appearance with a few clicks.
