Kondo is a tool dedicated to clearing obsolete files and folders from your storage, data that mainly comes from various programming and development projects. Therefore, the utility can come in handy for developers who are working on multiple projects simultaneously and accumulated junk over time. According to the developer, the tool works with a handful of projects, namely Cargo, Node, Unity, SBT, Haskell Stack, Maven, Unread Engine, Python and Jupyter Notebook. Nevertheless, developers can specify one or more paths to tell the application where to start the scan. Once the operation is done, the tool displays a window with all projects scanned and cleaned files.
