Photoshop CS5 provides a full complement of tools and plug-ins to help you create and manipulate images. One of the newest features in Photoshop CS5 is an improved layer system for working with image files. The filter system has also been

improved, and a tabbed interface provides access to layers and filters. Using the available Photoshop tutorials, you can use the layer system to create and edit almost any type of image. In the following sections, you learn some basics about creating new layers, editing layers, and saving and exporting layers. Creating Layers To begin any major manipulation, you have to start with a layer. Think of a layer as a single ink on a page. To add a layer to an image, choose Layer⇒New.

You're taken to the Layers dialog, where you can choose the type of layer you want to create. The table in Figure 3-4 shows the possible layer types in Photoshop. **Figure 3-4:** Choose a layer type when you create a layer. A layer is also a set of visual and adjustment layers grouped together in an image. When a layer is in memory, it is called a visible layer. You can have as many visible layers in an image as you need and, if you need to work on multiple image files, you can do so without slowing down

your Photoshop file. However, if you make a change to a visible layer that you don't want applied in other images, you must merge the layer back to the file before you save the file. To merge a layer, choose **Layer⇒Merge Visible Layers**. This option merges the layer back to the main file and is similar to placing the layer in a sublayer when you create it. Use the Layers panel to see the layers you've created so far in your Photoshop file. You can drag layers from your layers panel to other

areas, such as groups, to move them

What's New in the Photoshop CC 2015 Version 17?

The first Apple Watch Series 2 model
we looked at way back in October

was a stunning gold monstrosity that paired a high-end mechanical watch movement with durable 18-karat gold and a gold-plated ceramic back. Since that time, Apple has introduced several other color options to the lineup, including 18-karat gold, stainless steel, and rose gold. This week, an even more epic Apple Watch Series 2 version is being announced in Geneva, Switzerland. Dubbed the Apple Watch Series 2 "Viking" model, this latest edition comes in black and features an ice

blue-colored dial. It's hard to explain just how gorgeous this Apple Watch is when you look at it in person, but these images should hopefully help

convince you. The watch now also has a workout complication that lets you interact with your companion app while you're working out, and Apple's new health app can be used to monitor your daily activities and sleep. It's

also now cheaper than ever thanks to the new 12- and 18-month Apple Watch Series 1 watch bands, which are being sold for a mere \$149 and \$249 respectively. The watch's built-in rechargeable lithium-ion battery is slightly smaller, which some will argue is an improvement. The new Apple Watch Series 2 also has an A10X Processor, just like the newest iPhones. Apple Watch Series 2 "Viking" Apple Watch Series 2 "Viking" Apple Watch Series 2 "Viking" Apple Watch Series 2
